DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 3 and 5-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US20030040173A1 to Fonash et al.

Fonash et al teach a method for manufacturing a device which comprises forming a lower electrode (14) on a substrate; forming a sacrificial layer pattern on the substrate including the lower electrode (16); forming an upper electrode (16); forming an upper electrode on the substrate including the sacrificial layer pattern (18); removing the sacrificial layer so that a nano gap (20) is formed between the lower electrode and the upper electrode; and adsorbing conductive organic molecules (21) between the upper

electrode and the lower electrode in the nano gap. (See Figure 1; sections 0012, 0015, 0035 and 0048). Fonash et al describe well known scribing, machining, embossing, ablation, and lithography. Fonash et al do not describe forming a polymer pattern with the particular line width of 50nm, however this is a size limitation which could have been performed by electron beam etching and would have been obvious at the time applicant's invention was made to a person having ordinary skill in the art because the size is suitable for the manufacture of a molecular scale device.

Response to Arguments

Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,881,315 to Iida et al describe nano-scale e-beam lithography.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 1725

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
